

INSTRUCTIONS FOR USE
IN THE UNITED STATES AND CANADA
PureGraft® 50 System

DESCRIPTION
The Puregraft 50 System is a sterile, single-use, closed system intended for the preparation and delivery of autologous fat grafts back to the same patient for cosmetic and reconstructive surgery applications.

INDICATIONS FOR USE
The Puregraft 50 System is indicated for use in the harvesting, filtering and transferring of autologous fat tissue for re-injecting back into the same patient for aesthetic body contouring.

CONTRAINDICATIONS
The following are contraindications for use of the Puregraft 50 System:
• Intravenous applications.

STERILITY

The Puregraft 50 System is sterilized with gamma irradiation.

STORAGE AND HANDLING

• Use only if sterilization indicator is red.

WARNINGS

- Single Use Only – Do Not Reuse.
For a single use only.
- The harvested fat is only to be used for reimplantation without any additional manipulations. Any manipulations beyond those outlined in this Instruction For Use (IFU) are not recommended.
- Do not re-use the Puregraft 50 System during the same procedure. Re-use may compromise the sterility and adversely affect performance of the system.
- Do not overfill the Puregraft 50 System with more than 100 mL of total volume of tissue (50 mL) and/or washing solution (50 mL).
- This device should be used with extreme caution in patients with chronic medical conditions, such as diabetes, heart or lung diseases, circulatory diseases, or obesity.
- The volume of blood loss and endogenous body fluid may adversely affect intra and/or postoperative hemodynamic stability and patient safety. The capability of providing adequate, timely fluid replacement is essential for patient safety.

PRECAUTIONS
• Inspect the Puregraft 50 System package for signs of damage prior to use.

• The Puregraft 50 System is for single use only and must be used immediately after removal from the sterile packaging.

• Discard the entire Puregraft 50 System if the packaging is damaged, opened or the sterilization indicator is invalid.

• Aseptic techniques must be used to minimize the possibility of contamination of the Puregraft 50 System.

• Treat all blood and fluids using Universal Precautions (Blood-borne Pathogen Precautions).

• This device is designed to contour the body by removing localised deposits of excess fat through small incisions.

• Use of this device is limited to those physicians who, by means of residency training or sanctioned continuing medical education, have demonstrated proficiency in suction lipectomy.

• Results of the procedure will vary depending upon patient age, surgical sites, and experience of the surgeon. Results of the procedure may be temporary.

• The amount of fat removed should be limited to that necessary to achieve a desired cosmetic effect.

• Over inflating or over filling of the Puregraft 50 System may result in a biohazard to the operating staff and/or device malfunction.

• The Puregraft 50 System is to be used in combination with luer lock syringes for tissue transfer into and out of the Puregraft 50 System.

• Adipose tissue harvested using cannulas larger than 4 mm may cause clogging.

• Extracting graft too quickly may cause the Puregraft 50 System to collapse.

OPERATING INSTRUCTIONS

MATERIALS REQUIRED FOR PROCESSING	QUANTITY
Puregraft 50 System	1
Minimum 10 100 mL Lactated Ringer's	1
User provided	
Luer lock syringes (user provided)	2 or more
10ml or smaller	2 or more
60ml or smaller	2 or more

Note: Follow standard surgical sterility procedures when processing with the Puregraft 50 System.

Note: Refer to step symbols (1 2 3 4) when following operating instructions.

PREPARATION:

1. Open the Tyvek® pouch containing the sterile Puregraft 50.

TISSUE ADDITION:

2. Introduce 30 – 50 mL of harvested tissue into the Puregraft 50 System through the "Tissue/Wash" port using a luer lock syringe.

Note: Follow standard surgical sterility procedures when processing with the Puregraft 50 System.

Note: Refer to step symbols (1 2 3 4) when following operating instructions.

PREPARATION:

1. Open the Tyvek® pouch containing the sterile Puregraft 50.

TISSUE ADDITION:

2. Introduce 30 – 50 mL of harvested tissue into the Puregraft 50 System through the "Tissue/Wash" port using a luer lock syringe.

Note: Follow standard surgical sterility procedures when processing with the Puregraft 50 System.

Note: Refer to step symbols (1 2 3 4) when following operating instructions.

PREPARATION:

1. Open the Tyvek® pouch containing the sterile Puregraft 50.

TISSUE ADDITION:

2. Add 50 mL of Lactated Ringer's to the Puregraft 50 System through the "Tissue/Wash" port, regardless of input tissue volume.

3. Agitate contents in the Puregraft 50 System by rocking the system back and forth for a minimum of 15 seconds.

4. Place the Puregraft 50 System on a flat surface front side up for a minimum of 1 minute to allow contents to separate.

5. Attach an empty luer lock syringe to the "Drain" port.

6. Hold bag at an upright, angled position and slowly extract all waste fluid through the "Drain" port.

7. Repeat steps 3 – 7. Two washes are required for optimal graft output.

8. Hold bag at an upright, angled position and slowly extract all waste fluid through the "Drain" port.

SECOND WASH:

9. Repeat steps 3 – 7. Two washes are required for optimal graft output.

FIRST WASH:

3. Add 50 mL of Lactated Ringer's to the Puregraft 50 System through the "Tissue/Wash" port, regardless of input tissue volume.

4. Agitate contents in the Puregraft 50 System by rocking the system back and forth for a minimum of 15 seconds.

5. Place the Puregraft 50 System on a flat surface front side up for a minimum of 1 minute to allow contents to separate.

6. Attach an empty luer lock syringe to the "Drain" port.

7. Hold bag at an upright, angled position and slowly extract all waste fluid through the "Drain" port.

8. Repeat steps 3 – 7. Two washes are required for optimal graft output.

9. Extract and discard any excess fluid trapped in the "Tissue/Wash" port.

10. Hold slide at the sides and pull down to direct the graft towards the ports for extraction.

11. Extract the graft through the "Tissue/Wash" port using a new luer lock syringe.

12. Once the graft is removed from the Puregraft 50 System, properly dispose all components using Universal Precautions for Blood-borne Pathogens.

Precautions for Blood-borne Pathogens.

European Reporting Requirements: Any serious incident that has occurred in relation to the device should be reported to Bimini Health Tech and the competent authority of the Member State in which the user and/or patient are established.

INSTRUCTIONS FOR USE
IN ALL COUNTRIES EXCEPT UNITED STATES AND CANADA
PureGraft® 50 System

DESCRIPTION

This product is certified as a medical device in the European Union under the Medical Device Directive 93/42/EEC by SGS CE1639, exclusively for the indications of autologous fat transfer. Other non-medical uses such as aesthetic body contouring ascribed to this device are not within the scope of CE certification, and users should be aware product performance and/or safety has not been evaluated by SGS for these purposes.

INDICATIONS FOR USE
The Puregraft 50 System is a sterile, single-use, closed system intended for the preparation and delivery of autologous fat grafts back to the same patient for cosmetic and reconstructive surgery applications.
